ABSTRACT

This article explicates how 21st Century changes in the form of globalization are of historical scale, how they play out in terms of risks and inequalities shaping human experience, and how they have changed social welfare and public policy making worldwide. After presenting facts of inequality and such consequences as planetary poverty and gender stratification, it highlights the reformulation of economic power associated with burgeoning free-market economies and accompanying diffusion of instrumental rationality, standardization and commodification. In contrast with the recent US economic downturn and global softening of labor markets which cry for greater social protection, the welfare state of the last century has been replaced by a competitive state of the 21st century, as a "non-sovereign power" mindful of its global positioning but less powerful in shaping daily life among social forces including the role of NGOs. Indicating a lag between transnational developments and the way analysts think of social policies, the paper asserts that nation-states nonetheless serve important administrative functions in a world dominated by transnational corporate interests. In considering all the challenges to justice and governance, the authors argue that social welfare needs to be redefined and extended while market economy must be guided by moral principles that embody fundamental human values.

Keywords: Globalization and Post-Industrialism; Market Economy and Inequality; Social Welfare and Public Policy

1. INTRODUCTION

As we move into what can be called the "global century", many aspects of social and economic life are changing and post-industrial shifts are unparalleled by virtue of the interconnectedness that brings together the far corners of the globe. New technologies, new economic relationships, new social processes, and new political developments are all characteristics of globalization (Hudson and Lowe, 2004: 22) in a post-industrial age featured by information, innovation, finance, and services. As the world has contracted, people's quality of life has changed regardless of where they live. In fact, the propagation of free market mindsets in emerging economies has created collective network connections with considerable good but pervasive inequalities as well.

A principal aim of this paper is to explicate how these changes are of historical scale, how they are part of what post-industrial welfare is all about, and how they play out in terms of risks and inequalities shaping human experience. There is a tension with this. On the one hand, life expectancy, health statuses and per capital incomes are at an all-time high and many
